## , Continuation Sheet (PTO-303)

Application No.

Continuation of 3. NOTE:

Applicants' arguments with respect to claims 1-2 have been fully considered but they are not persuasive.

Applicants argue that Kyoichi does not teach/disclose an anchor with an attribute corresponding to the selection means, and thus Kyoichi does not teach/disclose attribute selection judgement means for judging that such an anchor is selected or attribute activation judgement means for judging that such an anchor is activated.

The Examiner disagrees for the following reasons. By disclosing in the abstract that "display data for calling the <u>input of figure key</u> are inserted by the HTML data control means 105 and displayed on the display means 106, and <u>link corresponding to the figure key input</u> due to user detected by the user input detecting means 108 is executed...the HTML data control means 105 executes move to the link destination corresponding to the user input..." (emphasis noted), and as depicted in figure 9, Kyoichi teaches that HTML hyperlinks or anchors are assigned/associated with input figure/numeric keys. These figures/numbers are considered to be <u>attributes</u> corresponding to the selection means, which in this case would be the figure/numeric keys that the user uses to make an input selection. Based on the user input selection of a figure/numeric key, selection and activation judgements are made to determine which associated anchor is selected as well as performing data acquistion from a server for the corresponding link destination accordingly.
